

Herculan Tennis Surfaces

Excellent for both Indoor and Outdoor Facilities

The Herculan range of tennis surfaces are made from only the finest polyurethanes which have everything our customers need. All systems are tested and fully approved so our clients can be sure about their choice of manufacturer and decide on Herculan for their quality tennis surface.

Our systems are eco-friendly and easy to maintain. With our wide range of custom colours and excellent UV-resistance, we can provide superior solutions for our clients.

Our qualifications and experience in sports floorings has resulted in this range, after years of research and development. The environment friendly surfaces are easy to re-surface, and provides a realistically low life cycle cost.

Playing Skills

Our range of systems are produced to meet the demands of the serious professional as well as the recreational player all over the World. The superior slide and slip resistance of the highly developed Court S topcoat, ensures total court comfort. Our range includes cushioned, semi-cushioned and hard court systems.

For professional players, Herculan TC Court Pro is the choice. It reduces the risk of lower back and leg, stress related injuries. The system is fully tested and approved and players will receive a totally professional response from this superb tennis surface.

The semi-cushion system, Herculan TC Court Competition, is a fully tested, cushioned system with superior qualities. The surface will not crack and will enjoy an extended lifetime. The Semi cushioned system provides excellent play characteristics and responds to all levels of play.

The hard court system, Herculan TC Court Club, has advanced wear strength and with the top quality Court S surface finish, provides a superior choice for the best budget tennis court on the market. This tennis surface has all the attributes needed to provide all styles of play.

Range Qualities

- True ball bounce

The Lifetime Value

All our surfaces are easy to maintain, and also easy to re-surface. All components used in the construction are fully tested and approved, providing you with the best tennis surface to last for many years. The proven life time shock absorption of the Herculan TC Court Pro, documented in the test certificates, confirms the absorption qualities in this system. Resurfacing every 5-7 years ensures your tennis court will last for many years.

Herculan TC Court Competition and Herculan TC Court Club also have the same benefits necessary to provide a life time's service coupled with a recommended resurfacing every 5-7 years.

Our Cooperative Partners

Herculan Sport Surfaces BV market their products throughout the World by networking very closely with a dedicated number of cooperative partners. Our Sales contacts and installation teams have a wealth of experience in all our systems giving our customers faith in the knowledge they will receive only the best results on each and every project.

System Performance and Response

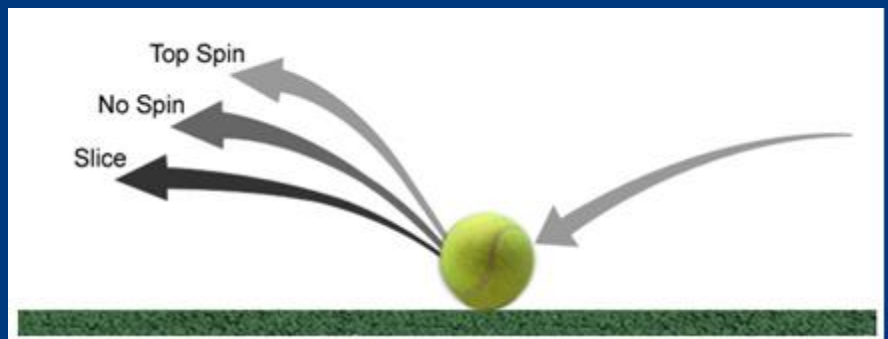

For many years Herculan have installed tennis courts the World over, both for recreational and professional play. We are delighted by the response, and it tells us that both professional players and coaches use our tennis courts on a daily bases to improve and to become well prepared for their game.

The response from both club and recreational players is very similar with typical comments as "great comfort" and "excellent feel" "no aches or pains".

Technical information

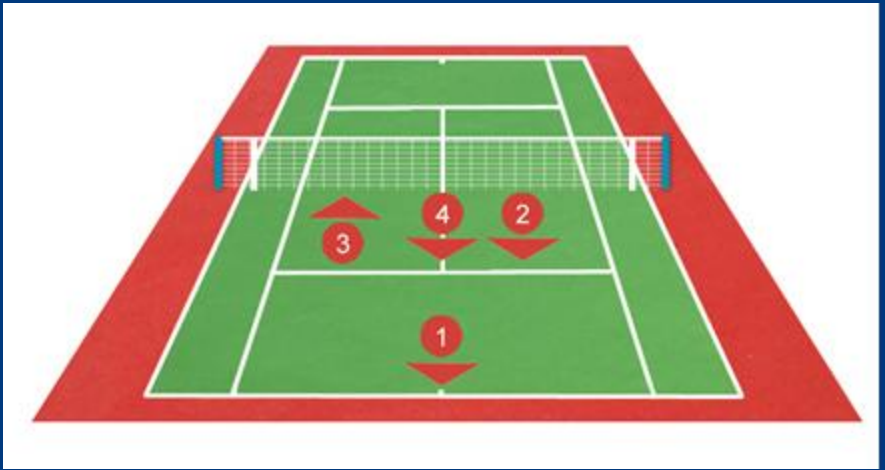

The range of Herculan tennis systems are manufactured from the two finest compound materials. All components have been individually tested, approved with all data documented in the product data sheets and system leaflets. These advise and confirm the true performance values of the product.

Herculan TC Court Club is a high performance tennis court for use in both recreational and professional play. It is also ITF accredited.

The Herculan tennis surfaces are specially designed to respond to all styles of play, with the structure of the court designed to provide a true game. From the illustration it can see how different degrees of spin react on our surface.

The true speed of the surface is tested by a ball machine to determine the angle of the ball with the surface and provides a general overview and certifies the structure's evenness and flatness all over court. The ITF Test is carried out in different positions on the court to check for variation in its structure.

The test above is to determine the pace of the court. However, all our systems, as mentioned earlier, have been through many other stringent tests to provide you, the client, with the surface needed and proof of a good and sound investment.

Our Herculan Court TC Pro fulfills all the requirements needed to be approved with EN 14904 sports floor quality certification. This excludes friction, because tennis has greater demands over a Multi Functional sports floor. For further details see the Herculan TC Court Pro leaflet.

Generally all our systems show the test results on the reverse side of the PDF document, advising of the quality of all our products.
